

Jupyter Project

Hamed Diomande

2023-01-21

My Jupyter Notebook on IBM Watson Studio

Hamed DIOMANDE

I graduated with a master in Mathematics and Statistics from the University of Ottawa and in the long term I want to become a data analyst in the financial industry like a banks and insurances or in businesses that provides services for the well being of others like Uber, Netflix, Amazon, etc.

I am interested in data science because I love the process of translating data into a story. Like using story-telling to generate insight and from these insights being able to make strategic choices to resolve problems or provide values to a company or an institution

The following code will generate 3 random numbers from a uniform distribution of range [5,10]

```
runif(3, min=5, max=10)
```

```
## [1] 9.766185 9.283099 6.673125
```

Information on me:

- Family Name: Diomande
- First name: Hamed
- Age: 24
